

KHUSHI PAL

Python Django Developer

Bhadohi, Uttar Pradesh | +91 8317097830 | palkhushi163@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Python Django Developer with hands-on production experience building scalable backend systems, REST APIs, and multi-role applications using Django REST Framework and PostgreSQL. Experienced with Docker, CI/CD (Jenkins), Redis, JWT/Firebase authentication, third-party API integration (payment gateways, LLMs), and real-time systems using WebSockets. Skilled in SQL, React, and data analysis with Power BI and Pandas, with a strong record of debugging production issues and shipping real-world applications.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Frameworks & Technologies: Django, Django REST Framework (DRF), React.js, REST API, WebSockets (Django Channels)

Frontend: HTML5, CSS3, JavaScript

Database: PostgreSQL, MySQL, SQLite

Authentication & Security: JWT (SimpleJWT), Firebase Authentication, Role-Based Access Control

DevOps & Tools: Docker, Jenkins, CI/CD, Git, GitHub, Render, Redis, Celery

Integrations: Razorpay Payment Gateway, Firebase Cloud Messaging (FCM), Groq LLM, VOSK Model

Libraries & Data Tools: NumPy, Pandas, Matplotlib, Power BI

WORK EXPERIENCE

Python Django Developer | Wesalvator-- March 2026 – Sep 2026

- Develop and maintain **50+ REST API** endpoints across scalable Django/DRF backend applications powering production systems.
- Integrate 3+ categories of third-party services — payment gateways, authentication providers, and **AI/LLM APIs** — to extend platform functionality.
- Reduced production issue resolution time by 20–25% through proactive debugging across Dockerized deployment environments.
- Collaborate with a 2–3-member frontend and DevOps team on feature releases using Git-based **CI/CD** workflows (Jenkins).

PROJECTS

EZShop — Multi-Vendor E-Commerce Backend

[Python](#) | [Django REST Framework](#) | [PostgreSQL](#) | [Docker](#) | [Redis](#) | [Jenkins](#) | [Razorpay](#) | [JWT](#)

Engineered and deployed a production-grade multi-vendor e-commerce backend for **Customers, Vendors, and Delivery Agents** using Django REST Framework and PostgreSQL. Delivered real-time order tracking, secure payments, and a fully containerized CI/CD deployment pipeline.

- Built real-time order tracking using **Django Channels** (WebSocket/ASGI) and enforced JWT-based role access for three user types.
- Integrated Razorpay and UPI payment solutions and implemented API rate limiting of 5 requests/minute for login and 10 requests/minute for order placement.
- Containerized with Docker (multi-arch amd64/arm64) and streamlined deployment via Jenkins CI/CD, with Nginx, Redis, and SSL-secured production infrastructure.

Siratulamal — Islamic Lifestyle App Backend

[Python](#) | [Django REST Framework](#) | [PostgreSQL](#) | [Redis](#) | [Celery](#) | [Firebase Auth](#)

Developed the backend for a large-scale Islamic mobile application with **22+ Django apps** covering prayer tracking, Qur'an/Hadith access, community Q&A, and a scholar-feed Fatwa service. Combined AI features with robust authentication and notification systems.

- Architected multi-mode authentication using **Firebase Auth**, SimpleJWT, and a custom JWT flow for the admin panel.
- Integrated Groq LLM to develop an AI-powered chatbot and orchestrate daily content feed generation.
- Implemented background job **scheduling** (Redis, Celery, APScheduler) and push notifications via Firebase Cloud Messaging across 22+ apps.

Fake Review Detection for Movies

[Python](#) | [Django](#) | [Machine Learning](#) | [SQLite](#)

- Engineered an NLP and machine learning-based system to classify movie reviews as fake or genuine using scikit-learn and text preprocessing techniques.
- Applied TF-IDF and stop-word removal techniques to convert reviews into meaningful features for classification.
- Trained and evaluated Logistic Regression, Naive Bayes, and Random Forest models; generated test cases for form validation, authentication, and CRUD functionality.

Om Enterprises — Invoice Manager

[Python](#) | [Django](#) | [SQLite](#)

- Created a Django-based Invoice Management web application to streamline invoice creation, storage, and management using MVT architecture.
- Established an interactive dashboard displaying key metrics: total invoices, paid/unpaid status, and overall billing summary.
- Automated invoice creation and management modules with tax and total calculations.

EDUCATION

S R Group of Institutions Management and Technology (AKTU) — B. Tech, Information Technology (CGPA: 8.5) Sep 2021 – 2025

Modern Inter College, Abhayanpur, Bhadohi — Intermediate, UP Board (CGPA: 8.4)

July 2021

ACHIEVEMENTS

- Runner-up, Badminton — SRIMT College Campus Sports Meet.
- Winner, World Paper Day Competition (2023) — initiated a paper carry bag and secured 1st place in the college-wide competition.
- Published a research paper titled “Exploring the Basics of Decision Trees.”
